

Hangtags & Stickers With Barcode

Written by KPGA - Cambodia

Variable information such as size, price and barcodes can be automatically captured and printed in the KPGA location that is local to production. Taking data direct from the source negates the need for re-entering data and eliminates the possibility of human error.

Speed is essential in the production of variable data and UPC items such as retail hangtags, pressure sensitive labels and fabric care labels. KPGA offers a number of solutions for in-plant production of variable-data items including laser, thermal transfer and solid-ink systems.
